SUPPLEMENT TO
REPORT NO.

THIS DOCUMENT CONTAINS INFORMATION AFFECTING THE NATIONAL DEFENSE OF THE UNITED STATES, WITHIN THE MEANING OF TITLE 18, SECTIONS 793 AND 794, OF THE U. S. CODE, AS AMENDED. ITS TRANSMISSION OR REVELATION OF ITS CONTENTS TO OR RECEIPT BY AN UNAUTHORIZED PERSON IS PROHIBITED BY LAW. THE REPRODUCTION OF THIS FORM IS PROHIBITED.

THIS IS UNEVALUATED INFORMATION

25X1

1. A radar station has been set up and tested by the Sachsenwerk Radeberg on the Falkenberg, at Dresden. Here are also experimental transmitters and short-wave stations.
2. During January 1952 the Sachsenwerk fitted out 25 cars like army command cars. They were delivered by IOWA and IFA works. Each car has transmitting and receiving equipment resembling the former German army equipment. Each car also has a UKW Type 903 talking apparatus, telephone equipment, and accessories. The cars weigh three tons. The power unit comes from the Funkwerk Koellada.
3. The current production of the works also includes transmitter installations, television receivers, and carriers. The transmitting sets are intended mainly for the Volkspolizei, Seepolizei, and dockyards. Twenty to thirty pieces are produced monthly, mostly transmitters of 100 watt power. Transmitters of one KW capacity are now being manufactured in a special program for dock yards.
4. The Radeberg plant works in close cooperation with the Sachsenwerk Niedersiedlitz, for which Radeberg is only a contractor. For example, Radeberg makes parts-testing equipment used as a trouble finder in cases of power breakdowns. This apparatus is equipped with a tube having a picture screen with a graduated scale. The Niedersiedlitz works also make separate parts for this, which are sent to Leipzig. The transmitting sets have tubes that conform in details to the L and P series.
5. On 12 February 1952 a staff of experts from Stassfurt, among them a Russian, came to the Niedersiedlitz works. It is supposed that it is intended to have the Sachsenwerk make the remote control equipment that was developed at Stassfurt during the war.

6. The carrier-frequency apparatus are former German Army types. Three kinds are built. The plans carry the designations TME 8-3 and TME 9-3. The sets are delivered to the Soviet Union and Czechoslovakia.
7. The television sets are intended for the Soviet Union and have tubes of the E series. Another apparatus is built which has tubes from the Oberspreewerk of the American Series 6 type: 6K7, 6KB, 6Q7, 6L6, 6E5, etc.
